

Student Management System

ABSTRACT

The student result management system is developed for strictly primary schools since most of them are analogue and so the system is going to help them manage students results easily that is the addition of the e-mail address to the system to communicate directly to a student's parent/guardian and sending student's results therefore countering the manipulation by students. The system will contain student details, students class details, subjects taught and students' examination results. This system will improve on a school's student management system. This student information management serves to assist teachers and students avoid very many biasness and inappropriate mistakes and also keep accurate information including students class, performance in various subjects and also registered users. The system is also provided with a high security since only authorized personnel can get access to the database and the system. The students result management system will also help administrators get the most accurate information about students and their progress as per their examinations results. The project is also a gateway to modern times ways of solving issues with examinations such as faking of results by students since it does not allow anyone to edit, manipulate or upload unwanted data into the system.
